Request for Proposal (RFP)

Network Infrastructure Design and Deployment

MediFleet Logistics

April 25, 2025

1. Introduction

MediFleet Logistics is a medical shipping and logistics company based in Little Rock, AR. As a time-sensitive and compliance-driven transportation service provider, our operations demand a high-performance, secure, and scalable IT infrastructure. We seek qualified vendors to design, procure, implement, and support a network infrastructure that serves our central headquarters, three remote warehouse sites, and a fleet of GPS-enabled vehicles.

This RFP outlines the scope of work, technical and security requirements, and vendor qualifications necessary for consideration. Proposals will be evaluated based on technical capability, experience, compliance with regulatory standards, cost-effectiveness, and ability to meet the project timeline.

2. Project Objectives

Deploy a high-availability network infrastructure for all MediFleet facilities.

Ensure HIPAA compliance and data security across all endpoints and transmission.

Integrate VLAN-based logical segmentation for secure, organized traffic flow.

Provide centralized monitoring, scalability for future growth, and minimal downtime.

3. Scope of Work

Physical Infrastructure

Structured cabling (Cat6) at headquarters and warehouse facilities.

Wireless access points for mobile scanning and inventory systems.

Power-over-Ethernet (PoE) switches for surveillance and access control.

Cellular routers with VPN tunnels for secure fleet connectivity.

Logical Design

VLAN configuration for Admin, Logistics, Guest Wi-Fi, and Surveillance traffic.

Static IP routing and core Layer 3 switching for internal traffic management.

IP schema as follows:

VLAN 10 – Admin: 192.168.10.0/24

VLAN 20 – Logistics: 192.168.20.0/24

VLAN 30 – Guest: 192.168.30.0/24

VLAN 40 – Surveillance: 192.168.40.0/24

Security Requirements

Fortinet FortiGate firewall with unified threat management (UTM).

Snort-based intrusion detection and prevention system (IDS/IPS).

Endpoint protection via CrowdStrike Falcon EDR.

Email and web filtering through Barracuda gateway.

FortiClient SSL VPN for secure remote access.

Multi-Factor Authentication (MFA) using Duo integrated with Active Directory.

4. Estimated Equipment and Labor Costs

Category & Cost

Equipment & Software $60,850

Design, Installation & Training $33,000

Total Project Cost $93,850

This includes all networking hardware, software licenses, structured cabling, rack infrastructure, professional labor, and user training.

5. Proposal Requirements

Vendors must submit a complete proposal that includes the following:

Company background and relevant experience

Technical approach and detailed implementation plan

Equipment and software specifications

Total cost breakdown with itemized pricing

Timeline aligned with the proposed 6-week deployment plan

References from previous network projects in the healthcare/logistics industries

Documentation on HIPAA compliance experience

6. Project Timeline

The desired project start date is May 20, 2025, with full deployment completed by June 30, 2025. The project schedule includes:

Week 1–2: Procurement and cabling installation

Week 3–4: Equipment deployment and configuration

Week 5: Security testing and compliance validation

Week 6: Staff training and operational hand-off

7. Submission Details

Contact Person: Jared Pierce, IT Manager

Phone: (501) 625-2732

Email: jared.pierce@medifleetlogistics.com

8. Evaluation Criteria

Technical merit and design compatibility (30%)

Cost effectiveness (25%)

Experience and qualifications (20%)

Regulatory and security compliance (15%)

Project timeline and support plan (10%)
