Disaster Recovery Plan

1. **Introduction**

   Purpose: Ensure a quick recovery that allows continuity of Medifleet Logistics' network in the event of a disaster.

   Scope: Covers Headquarters, warehouses, fleet vehicles' connectivity, cloud services, and all critical systems.

2. **Objective**

   Minimize network data loss.

   Minimize Downtime.

   Restore operations in a timely manner within RTO and RPO.

   Ensure HIPAA compliance during recovery.

3. **Risk Assessment**

   Threats:

   Natural Disasters

   Cyberattacks

   Hardware failure

   Power Outage

   Human Error

   Impact Analysis:

   Network downtime impacts shipment tracking and logistics.

   Data Breaches affect HIPAA compliance and customer trust.

4. **Roles and Responsibilities**

   Disaster Recovery Manager: Oversees recovery efforts

Network Engineers: Restore hardware and network configs.

Security Team: Monitor threats and secure restored environments.

Operations Manager: Coordinate business continuity

5. **Critical Systems and Priority List**

   Firewall

   Core Layer 3 Switch

   VPN and Endpoint Security

   Cellular Routers for fleet tracking

   Cloud-Integrated Services

6. **Backup Strategy**

   Onsite Backups: Daily snapshots of server data (stored locally in backup servers)

   Offsite and Cloud Backups: Encrypted uploads to HIPAA-compliant cloud storage.

   Configuration Backups: Weekly backups of switch, firewall, and router configs stored securely onsite and offsite.

7. **Disaster Recovery Procedures**

   Detection and Assessment: Monitor alerts and confirm incident severity

   Containment: Isolate affected segments and Disable compromised fleet vehicle routers.

   Restoration: Restore critical network services from the most recent backups. Reimage compromised servers and Endpoints. Reconfigure network devices using backup configs.

   Testing and Validation: Validate connectivity for Admin, Logistics, Security VLANS. Test VPN access for remote users. Confirm surveillance camera feeds and logistics scanners are operable.

8. **Testing and Maintenance**

Quartely DR Tests: Simulate network and data recovery from failure. Rotate tests responsibilities among different teams.

Annual Simulation: Full HQ and warehouse simulated outage and recovery drills.

Equipment and Software Updates: Firmware updates on switch and firewalls quarterly.

Documentation Updates: Update DR plan immediately after major changes in network infrastructure.

9. **Plan Review and Approval**

Review Cycle: DR plan to be reviewed semi-annually. Reviewed after any actual disaster or major network changed.

Approval Authority: Disaster Recovery Manager and Operations Manager.
